The Board of Trustees
City of Grand Rapids General
Retirement System
Grand Rapids, Michigan

Dear Board Members:

The results of the **43rd Annual Actuarial Valuation** of the City of Grand Rapids General Retirement System are presented in this report. The purpose of the annual valuation is to measure the System's funding progress and to determine the City's contribution rate for the ensuing fiscal year in accordance with the established funding policy.

The date of the valuation was **June 30, 2010**.

The valuation was based upon statistical data furnished by your Executive Director concerning Retirement System benefits, financial transactions, individual members, terminated members and retirants and beneficiaries. Data was checked for internal and year-to-year consistency, but was not otherwise audited. This information is summarized in Section B.

To the best of our knowledge, this report is complete and accurate and was made in accordance with standards of practice prescribed by the Actuarial Standards Board and in compliance with the Retirement System Ordinance.

The actuaries submitting this report are Members of the American Academy of Actuaries (MAAA) as indicated, and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

Respectfully submitted,

Randall J. Dzulubek, ASA, MAAA

David L. Hoffman

NLJ\RJD\DLH:bd

SECTION A
VALUATION RESULTS

**CONTRIBUTIONS TO PROVIDE BENEFITS
FOR FISCAL YEAR BEGINNING JULY 1, 2011**

Contributions for	% of Active Payroll
Normal cost of benefits:	
Age & service pensions	15.37 %
Disability pensions (CRF)	0.64 %
Death-in-service pensions	0.22 %
Refunds of member contributions	0.30 %
Totals	16.53 %
Member contributions (weighted average) #	4.41 %
Employer Normal Cost	12.12 %
Unfunded actuarial accrued liabilities (Full funding credit)*	8.01 %
COMPUTED EMPLOYER RATE @	20.13 %

* Amortized as a level percent-of-payroll over a period of 28 years.

Weighted average of member contribution rates described on pages B-5 and B-6.

@ In addition to this percent-of-payroll contribution, the City contributes for (i) certain Supplemental Benefits for a small, closed group of retirants and beneficiaries in accordance with the provisions of Ordinance Section 1.290, and (ii) 0.5% of payroll to provide a Medicare Supplement for members retiring after December 31, 1989.

DETERMINING EMPLOYER DOLLAR CONTRIBUTIONS

For any period of time, the percent-of-payroll contribution rate needs to be converted to dollars – and then contributed to the Retirement System in a timely manner.

The recommended procedure is: (1) *at the end of each payroll period, multiply the active member payroll for the period by the employer contribution percent;* and (2) *promptly contribute the dollar amount so determined.*

The valuation payroll is \$49,336,606.

**ALLOCATION OF VALUATION ASSETS
YEAR ENDED JUNE 30, 2010**

In financing the actuarial accrued liabilities, valuation assets of \$366,543,009 were distributed as follows:

Reserves for	Present Valuation Assets Applied to			Totals
	Non-Retired Member Actuarial Accrued Liabilities	Retired Life Actuarial Liabilities	Contingency Reserve	
Member Contributions (MDF)	\$ 25,593,223			\$ 25,593,223
Employer Contributions (EAF)	98,144,001			98,144,001
Retired Benefit Payments (BRF)	(5,278,094)	\$262,955,892		257,677,798
Undistributed Income (IEF)	(14,872,013)			(14,872,013)
Totals	\$103,587,117	\$262,955,892	\$0	\$366,543,009

Assets were applied against actuarial accrued liabilities in determining unfunded actuarial accrued liabilities as follows:

	Retired Lives	Non-Retired Members	Total
Computed Actuarial Accrued Liabilities and Reserves	\$262,955,892	\$172,937,598	\$435,893,490
Applied Assets	262,955,892	103,587,117	366,543,009
Unfunded Actuarial Accrued Liabilities (Full Funding Credit)	\$ 0	\$ 69,350,481	\$ 69,350,481

**DERIVATION OF EXPERIENCE GAIN (LOSS)
YEAR ENDED JUNE 30, 2010**

Actual experience will never (except by coincidence) coincide exactly with assumed experience; sizable year-to-year fluctuations are common. Gains and losses often cancel each other over a period of years. Detail on the derivation of the experience gain (loss) is shown below, along with a year-by-year comparative schedule.

	<u>2009-2010</u>	<u>2008-2009</u>
(1) UAAL* at start of year	\$10,203,118	\$(21,782,411)
(2) Employer normal cost from last valuation	6,227,339	5,838,971
(3) Actual employer contributions	4,708,020	3,833,164
(4) Interest accrual:		
[(1) + ½ [(2) – (3)]] x .075	822,208	(1,558,463)
(5) Expected UAAL before changes:		
(1) + (2) – (3) + (4)	12,544,645	(21,335,067)
(6) Increase from benefit changes	5,419,723	0
(7) Change from revised actuarial assumptions or valuation methods	21,459,299	0
(8) Change in SPDR (13th Check Reserve)	none	none
(9) Expected UAAL after changes:		
(5) + (6) + (7) + (8)	39,423,667	(21,335,067)
(10) Actual UAAL at end of year	69,350,481	10,203,118
(11) Gain (loss): (9) - (10)	\$(29,926,814)	\$(31,538,185)
(12) Gain (loss) as percent of actuarial accrued liabilities at start of year (\$391,339,300)	(7.6%)	(8.4%)

* *Unfunded Actuarial Accrued Liabilities.*

Valuation Date June 30	Experience Gain (Loss) As % of Beginning Accrued Liability
2005	2.1 %
2006	9.1 %
2007	6.0 %
2008	(6.5)%
2009	(8.4)%
2010	(7.6)%

SUMMARY STATEMENT OF SYSTEM RESOURCES AND OBLIGATIONS
YEAR ENDED JUNE 30, 2010

Present Resources and Expected Future Resources

A.	Present valuation assets:	
	1. Net assets from system financial statements	\$300,757,330
	2. Market value adjustment	<u>\$ 65,785,679</u>
	3. Valuation assets	\$366,543,009
B.	Actuarial present value of expected future employer contributions:	
	1. For normal costs	\$ 50,564,875
	2. For unfunded actuarial accrued liability	<u>\$ 69,350,481</u>
	3. Total	\$119,915,356
C.	Actuarial present value of expected future member contributions	<u>\$ 17,560,682</u>
D.	Total Present and Expected Future Resources	<u><u>\$504,019,047</u></u>

Actuarial Present Value of Expected Future Benefit Payments

A.	To retirants and beneficiaries:	
	1. Annual pensions	\$262,955,892
	2. Reserve	<u>0</u>
	3. Total	\$262,955,892
B.	To vested terminated members	\$ 7,889,040
C.	To present active members:	
	1. Allocated to service rendered prior to valuation date - actuarial accrued liability	\$165,048,558
	2. Allocated to service likely to be rendered after valuation date	<u>68,125,557</u>
	3. Total	\$233,174,115
D.	Total Actuarial Present Value of Expected Future Benefit Payments	<u><u>\$504,019,047</u></u>

COMMENTS, RECOMMENDATIONS AND CONCLUSION

COMMENT A: Overall experience fell far short of expectations during the period ending June 30, 2010 (see page A-3). Nearly the entire loss resulted from a lower than assumed rate of recognized investment income (i.e., on a funding value basis) as well as more retirements than expected. On a market value basis there was a \$23 million gain, which, under the Asset Valuation Method, will not be fully recognized until 2014.

COMMENT B: The Actuarial Value of Assets exceeded the Market Value of Assets by \$65.8 million as of June 30, 2010. Without offsetting gains in the near term, recognition of the loss will result in an expected employer contribution of about 28% of payroll in FY 2016. Note that the ratio of assets computed under funding value relative to the market value of assets is 122% (\$367 million and \$301 million, respectively). This is an improvement of the prior year.

COMMENT C: Below is the 5-year contribution rate projection based on market returns of 7.25% and a 28 year amortization period. These projections are based on all future experience matching exactly with our assumptions of future experience. Gains and losses in other risk areas may also have a material effect on contribution rates in future years.

Grand Rapids General Retirement System							
Projected Valuation Results							
(Amounts in \$ Millions)							
Valuation Year	Funding Value	Employer Rate	Funded Ratio	MV Returns	FV Return	Market Value	MV-FV
2010	\$367	20.13%	84%	19.68%	0.20%	\$301	\$(66)
2011	351	22.95%	78%	7.25%	(0.19%)	307	(44)
2012	333	26.15%	72%	7.25%	(1.48%)	316	(17)
2013	326	28.10%	68%	7.25%	1.76%	326	(0)
2014	341	27.82%	69%	7.25%	8.09%	338	(3)

COMMENTS, RECOMMENDATIONS AND CONCLUSION

COMMENT D: The June 30, 2010 actuarial valuation reflects economic and demographic assumptions adopted by the Board in two different meetings. The valuation also incorporates negotiated benefit changes.

In the first meeting, the Board adopted recommendations presented, by the actuary, as part of the recently completed five-year experience study. The key change in these assumptions was the lowering of the investment return assumption from 7.5% to 7.25%. The immediate impact of the new assumptions was to increase the computed employer contribution rate by 1.61% of valuation payroll.

In the second meeting, the Board adopted an investment return assumption that reflected the cessation of the 13th check program for member classification groups that had negotiated guaranteed post-retirement benefit increases. This change is modeled by eliminating the reduction in the investment assumption to reflect the “skimming” that results as part of the 13th check program. The investment return assumption then used for these groups is 7.5% on any member that does not participate in the 13th check program. The post-retirement increases are now reflected in the valuation (detail on the groups affected and the actual benefit can be found on page B-7). The immediate impact of these changes was to increase the computed employer contribution rate by 0.78% of valuation payroll.

In addition to the post-retirement increases, the ability of members to cash in unused sick time for a year of service credit was included in the June 30, 2010 valuation. The immediate impact of these changes was to increase the computed employer contribution rate by 1.23% of valuation payroll. Last, the weighted average member contribution was adjusted to reflect the new higher rates for certain employees required to continue to accrue benefits at the current level. The immediate impact of this change was to lower the computed employer contribution rate by 0.40% of valuation payroll.

The expected increase in computed employer contributions was previously computed for the first and third change computed above. The results in the valuation are slightly higher than previously computed. This is a result of the significant difference between actual valuation payroll and expected valuation payroll as of June 30, 2010. The valuation payroll for June 30, 2009 was \$51.8 million, with assumed wage inflation of 3.5% and the assumption that the number of covered members would be unchanged, the expected June 30, 2010 valuation payroll would have been over \$53.6 million rather than the actual \$49.4 million that was reported.

COMMENTS, RECOMMENDATIONS AND CONCLUSION

RECOMMENDATION FOR REGULAR RESERVE TRANSFER: Inter-fund transfers are made either when (i) there is a residual June 30 balance in the Income-Expense Fund (IEF) after regular interest credits have been made or (ii) the year end balance in the Benefit Reserve Fund (BRF) falls below the present value of benefits currently being paid. On June 30, 2010, there was a balance in the IEF (see page B-8). Therefore, adjusting transfers on the following page are recommended.

Transfer		Amount	
From	To	Market	Cost
EAF	BRF	\$ 5,278,094	\$ 5,278,094
EAF	IEF	14,872,013	19,152,976

Ending balances in each reserve fund as of June 30, 2010, were assumed to be as follows:

	MDF	EAF	BRF	IEF
Market	\$25,593,223	\$12,208,215	\$262,955,892	\$0
Cost	25,593,223	7,821,722	262,955,892	\$0

CONCLUSION: The City's contribution rate for the fiscal year beginning July 1, 2011 has been computed to be 20.13% of active member payroll based on the funding policy specified in the retirement ordinance.

* Retirement System amended.
@ Revised actuarial assumptions.
Revised asset valuation method.

- 1 Valuation Assets as a Percent of AAL** is a traditional measure of a system's funding progress. Except in years when the system is amended or actuarial assumptions are revised, this percent can be expected to move gradually toward 100%.
- 2 UAAL as a Percent of Valuation Payroll** is another relative index of condition. Unfunded actuarial accrued liabilities represent debt, while active member payroll represents the system's capacity to collect contributions to pay toward debt. The lower the percent, the greater the financial strength and vice-versa.

Benefits as a Percent of Payroll

ACTUARIAL ACCRUED LIABILITIES & ASSETS

SECTION B
VALUATION DATA

SUMMARY OF BENEFIT PROVISIONS EVALUATED (JUNE 30, 2010)

Voluntary Retirement. A member may retire after 30 years of service regardless of age, or after attaining age 62 and completing 8 years of service. Effective January 1, 2001, members covered by the Emergency Communications Operators Bargaining Unit, after attaining age 55 and completing 8 years of service.

Final Average Salary (FAS). The average of member's highest annual salary rates, all before completion of the calendar year in which the member attains 40 years of service or reaches the benefit cap, during the three calendar years of credited service when such salary rates were the highest.

Members of the Crime Scene Technicians group have an additional sum added to their FAS, effective July 1, 2000. The sum is calculated based on an average of the group's additional compensation items during the previous three calendar years and the average of the group's valuation payroll as of June 30 for the five-year period immediately preceding the valuation.

Emergency Communication Operators I and II also have an additional sum added to their FAS, effective July 1, 2005. The sum is calculated based on an average of the group's additional compensation items during the previous five calendar years and the average of the group's valuation payroll as of June 30 for the five-year period immediately preceding the valuation.

Members who retire with 10 or more years of continuous service may use up to two thousand eighty (2,080) hours (1,265 for Crime Scene Technician members) of accumulated sick leave to purchase up to one (1) year of additional credited service, on a pro rata basis.

Full Age and Service Allowance. The members' benefit multipliers, used to compute full age and service allowance, are shown in the tables on the following page.

In lieu of this single life-level amount form of payment, a retiring member may elect from several optional forms of payment, each of which is the actuarial equivalent of this single life-level payment form.

**SUMMARY OF BENEFIT PROVISIONS EVALUATED
(JUNE 30, 2010)**

Covered Employee Group	Date of Termination	Benefit Multiplier	Allowance Cap
Non – Represented Supervisors, Administrative, Clerical and Executive Classifications, Appointed, Elected officials, and Judges only	January 1, 2005	2.7%	36 years and 1 month for employees hired prior to January 1, 2005 35 years for employees hired on or after January 1, 2005

GREIU-61st District Court	January 1, 2005	2.7%	36 years and 1 month for employees hired prior to January 1, 2005 35 years for employees hired on or after January 1, 2005
61st District Court Management Non-represented and APAGR 61st District Court Management	January 1, 2005	2.7%	36 years and 1 month for employees hired prior to January 1, 2005 35 years for employees hired on or after January 1, 2005
Association of Public Administrators (APA)	January 1, 2005	2.7%	36 years and 1 month for employees hired prior to January 1, 2005 35 years for employees hired on or after January 1, 2005

SUMMARY OF BENEFIT PROVISIONS EVALUATED (JUNE 30, 2010)

Early Allowance. If a member leaves covered employment after either (i) completing 20 years of credited service, or (ii) both attaining age 55 and completing 10 years or more of credited service, he can receive an immediate early allowance, computed in the same manner as an age and service allowance based upon salary and service to time of termination but actuarially reduced to reflect the fact that the age when payments begin is younger than age 62.

Deferred Retirement. A member with 8 or more years of credited service who terminates employment before voluntary retirement age and does not withdraw accumulated contributions will be eligible for a deferred allowance beginning at age 62, based upon service and final average salary at time of termination.

Death Benefit. If the member's termination of employment is because of death, a benefit equal to the termination benefit is payable to a beneficiary or estate, as follows:

A refund of accumulated contributions. In addition, a "termination bonus" equivalent to a certain percent of member contributions without interest may be payable. Such percent is 25%, plus 7.5% for each whole year of credited service in excess of 10 years, to a maximum of 100% for 20 or more years service, times an age-based Termination Bonus Percent.

If the member was eligible for normal or early retirement at the time of death, in lieu of the lump sum death benefit an eligible beneficiary will begin receiving a B-100 joint and survivor pension computed in the same manner as a service retirement pension as if the member had retired the last day of his life.

Or, if the member was not represented by any collective bargaining unit or was represented by the Association of Public Administrators, the Grand Rapids Employees Independent Union or the 61st District Court Employee's Association, and the primary beneficiary was the surviving spouse, the benefit will be computed in the manner described in the preceding paragraph, except that the member will have been assumed to have reached the age for minimum service retirement at the date of his death.

The total amount of death benefit payable cannot exceed 90% of the member's annual rate of compensation at the time of death reduced by any worker's compensation or social security payments.

SUMMARY OF BENEFIT PROVISIONS EVALUATED (JUNE 30, 2010)

Disability Benefit. If a member has 10 or more years of credited service before attaining the minimum service retirement age and becomes totally and permanently disabled, a benefit computed in the same manner as a full age and service benefit is payable. If disablement is a result of performance of duty, the 10-year minimum credited service requirement is waived and the benefit is computed as above with a minimum benefit of 50% (62% for those represented by police bargaining units) of final average salary.

The total amount of benefit payable due to disablement cannot exceed 90% of the member's annual rate of compensation at the time of disablement reduced by any worker's compensation payments, Social Security benefits, (disability benefits), and remuneration from any gainful employment.

Member Contributions. The contribution rates used are defined in the following table:

Member Classification	Period	Contribution Rate * [@]
Non – Represented Supervisors, Administrative, Clerical and Executive Classifications, Appointed, Elected Officials, and Judges only	January 1, 1997 to December 31, 2004	3.28%
	On and after January 1, 2005	4.93%
G.R. Museum full-time Supervisory and Administrative staff	January 1, 1997 to December 31, 2004	3.28%
	On and after January 1, 2005	4.93%
G.R. Public Museum Non-Supervisory staff (not covered by Management Compensation & Fringe Benefits Handbook)	January 1, 1997 to December 31, 2004	3.28%
	On and after January 1, 2005	4.93%
Emergency Communications Operators I and II represented by POLC	January 1, 1997 to June 30, 2005	2.28%
	On and after July 1, 2005	5.36%
Emergency Communication Supervisors	On or before December 31, 2005	3.28%
	On or after January 1, 2006	6.27%
Crime Scene Techs/Latent Print Examiners represented by the GRPOLC #	After July 1, 1990	2.00%

* 0.00% in the year following the calendar year in which the employee attains 40 years of service, 39 years for APA members.

The member contribution rate drops by 1.00% of pay if the City makes no contribution.

[@] Some members voluntarily contribute 10.20% of pay rather than 4.93%.

**SUMMARY OF BENEFIT PROVISIONS EVALUATED
(JUNE 30, 2010)**

Member Classification	Period	Contribution Rate *
GREIU	On or after January 1, 1997	3.28%
	On or after January 1, 2005	3.89%
Library Rank and File & Supervisory Employees	January 1, 1997 to December 31, 2005	3.28%
	On or after January 1, 2006	3.63%
Library Management and Confidential Employees	January 1, 1997 to December 31, 2004	3.28%
	On or after January 1, 2005	4.93%
GREIU-61 st District Court	January 1, 1997 to May 31, 2005	3.28%
	On or after June 1, 2005	4.00%
61 st District Court Management Non-represented and APAGR 61 st District Court Management	January 1, 1997 to December 31, 2004	3.28%
	On or after January 1, 2005	4.00%
Association of Public Administrators (APA)	January 1, 1997 to December 31, 2004	3.28%
	On or after January 1, 2005	3.99%

If a member terminates employment before any allowance is payable, accumulated contributions (contributions plus regular interest) are refunded.

Employer Contributions. The City contributes the remainder amounts necessary to maintain the Retirement System in sound financial condition in accordance with its funding objectives.

Compensation. Compensation recognized for retirement system purposes includes base pay and longevity pay.

**SUMMARY OF BENEFIT PROVISIONS EVALUATED
(JUNE 30, 2010)**

Post Retirement Increases. Post retirement benefit increases are 0% unless otherwise stated:

Member Classification	Period	Escalator
GREIU and GREIU-61st District Court	On or after March 24, 2009	1.0%, 4 year delay
Library Rank and File & Supervisory Employees	On or after July 9, 2009	1.0%, 4 year delay
Emergency Communications Operators I and II represented by POLC and Crime Scene Techs/Latent Print Examiners represented by the GRPOLC #	On or after May 12, 2009	1.0%, 6 year delay
Association of Public Administrators (APA)	On or after October 21, 2008	1.0%, 4 year delay

13th Check. One-half of net investment income over 8% which is attributable to retired life assets is distributed annually (in January) to retired members and beneficiaries who have been on the retirement rolls for 5 years in the form of a 13th check. Net investment income is based on a book value rate of return averaged over the preceding 5 plan years. The distribution is in proportion to points. An individual's points are determined by multiplying (i) the number of full years of retirement, to a maximum of 15, by (ii) the number of years, and fractions thereof, of service at retirement. Only member classification groups not covered by the post-retirement increase participate in the 13th check program.

The Funding Value of Assets recognizes assumed investment return (line E3) fully each year. Differences between actual and assumed investment return (line E4) are phased in over a closed 5-year period. During periods when investment performance exceeds the assumed rate, Funding Value of Assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, Funding Value of Assets will tend to be greater than market value. If assumed rates are exactly realized for 4 consecutive years, funding value will become equal to market value.

SECTION C

SUMMARY OF VALUATION METHODS AND ASSUMPTIONS

VALUATION METHODS

Age and Service Benefits and Casualty Benefits. Normal cost and the allocation of benefit values between service rendered before and after the valuation date was determined using an individual entry-age actuarial cost method having the following characteristics:

- (i) The annual normal costs for each individual active member, payable from the date of employment to the date of retirement, are sufficient to accumulate the value of the member's benefit at the time of retirement;
- (ii) each annual normal cost is a constant percentage of the member's year-by-year projected covered pay.

Financing of Unfunded Actuarial Accrued Liabilities. Unfunded actuarial accrued liabilities were amortized by level (principal & interest combined) percent-of-payroll contributions over a period of 28 years.

According to City Code Section 1.221, "The pension reserves so determined less the applicable balance in the employer accumulation fund shall be amortized over a period of years, as determined by the employer, to determine the employer's accrued service contribution."

ACTUARIAL ASSUMPTIONS USED FOR THE VALUATION ADOPTED BY THE BOARD OF TRUSTEES

The actuary calculates the contribution requirements and benefit values of the System by applying financial assumptions to the benefit provisions and people information furnished, using the valuation methods described on the previous page.

The principal areas of financial risk which require assumptions about future experiences are:

- (i) Long-term rates of investment return to be generated by the assets of the System,
- (ii) patterns of pay increases to members,
- (iii) rates of mortality among members, retirants and beneficiaries,
- (iv) rates of withdrawal of active members (without entitlement to a retirement benefit),
- (v) rates of disability among members,
- (vi) the age patterns of actual retirement.

In a valuation, the actuary calculates the monetary effect of each assumption for as long as a present covered person survives - - - a period of time which can be as long as a century.

Actual experience of the System will not coincide exactly with assumed experience, regardless of the wisdom of the assumptions, or the skill of the actuary and the precision of the many calculations made. Each valuation provides a complete recalculation of assumed future experience and takes into account all past differences between assumed and actual experience. The result is a continual series of adjustments (usually small) to the computed contribution rate.

From time to time it becomes appropriate to modify one or more of the assumptions, to reflect experience trends (but not random year-to-year fluctuations).

The rates of salary increase used for individual members are in accordance with the following table. This assumption is used to project a member's current salary to the salaries upon which benefit amounts will be based.

Salary Increase Assumptions For an Individual Member			
Sample Ages	Merit & Seniority	Base (Economic)	Increase Next Year
20	4.2%	3.5%	7.7%
25	2.9	3.5	6.4
30	2.0	3.5	5.5
35	1.5	3.5	5.0
40	1.1	3.5	4.6
45	0.7	3.5	4.2
50	0.3	3.5	3.8
55	0.1	3.5	3.6
60	0.0	3.5	3.5
65	--	3.5	3.5

Service at Beginning of Year	Additional Service Based Merit/Seniority Portion of Annual Increases
	Present
1	4.00%
2	3.00%
3	1.75%
4	1.75%
5	1.75%

If the number of active members remains constant, then the total active member payroll will increase 3.5% annually, the base portion of the individual salary increase assumptions. Increasing payroll was recognized in amortizing unfunded actuarial accrued liabilities. This assumption was first used for the June 30, 2006 valuation.

The rate of investment return was 7.50% a year compounded yearly (net after expenses and before adjustment for the 13th check program). This assumption is used to make money payable at one point in time equal in value to a different amount of money payable at another point in time. This assumption was first used for the June 30, 2010 valuation.

The mortality tables were the 1983 Group Annuity Male and Female Mortality Tables setback 3 years for males and 2 year for females. (These tables were first used for the June 30, 2006 valuation and benefit computations.)

Sample Ages	Value at Retirement of \$1 Monthly for Life		Future Life Expectancy (Years)	
	Men	Women	Men	Women
50	\$142.39	\$149.52	31.90	36.81
55	135.01	143.78	27.42	32.10
60	125.92	136.25	23.13	27.48
65	114.57	126.63	19.02	23.02
70	101.23	114.62	15.23	18.76
75	87.08	100.30	11.92	14.81
80	72.40	85.10	9.08	11.40

This assumption is used to measure the probabilities of members dying before retirement and the probabilities of each benefit payment being made after retirement. For purposes of the pre-retirement death benefit, it was assumed that 100% of members were married at the time of death and the probability of death-in-service at any age, that results in a benefit payment, is one half that of the mortality assumption for retirees.

The rates of retirement used to measure the probability of eligible members retiring during the next year were as follows. These rates were first used for the June 30, 2010 valuation.

A member is eligible for retirement after completing 30 or more years of service or after both attaining age 62 and completing 8 or more years of service.

Retirement Ages	Percent Retiring	Retirement Ages	Percent Retiring
50	35%	60	35%
51	35	61	35
52	35	62	35
53	35	63	35
54	35	64	35
55	35	65	50
56	35	66	60
57	35	67	70
58	35	68	80
59	35	69	90
		70-79	100
		80	100

Rates of separation from active membership were as follows:

(Rates do not apply to members eligible to retire and do not include separation on account of death or disability.) This assumption measures the probabilities of members remaining in employment. These rates were first used for the June 30, 2010 valuation.

Sample Ages	Years of Service	% of Active Members Separating Within Next Year	
		Men	Women
ALL	0	10.00%	10.00%
	1	7.00	7.00
	2	6.00	6.00
	3	5.00	5.00
	4	5.00	5.00
20	5 & Over	2.99	5.95
25		2.91	5.79
30		2.79	5.42
35		2.58	4.71
40		2.30	3.86
45		1.95	2.98
50		1.36	1.92
55		0.52	0.70
60		0.05	0.07

The rates of disability were as follows:

Sample Ages	% of Active Members Becoming Disabled Within Next Year		
20	0.01%		
25	0.01		
30	0.01		
35	0.04		
40	0.07		
45	0.16		
50	0.31		
55	0.47		
60	0.61		
		Duty-Related	Non-Duty Related
Cause of Disability:	Male	30%	70%
	Female	30%	70%

SUMMARY OF ASSUMPTIONS USED
JUNE 30, 2010
MISCELLANEOUS AND TECHNICAL ASSUMPTIONS

Marriage Assumption:	100% of males and females are assumed to be married for purposes of death-in-service benefits.
Pay Increase Timing:	Beginning of (Fiscal) year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date.
Decrement Timing:	Decrements of all types are assumed to occur in the middle of the year.
Eligibility Testing:	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
Benefit Service:	Exact fractional service is used to determine the amount of benefit payable.
Decrement Relativity:	Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
Decrement Operation:	Disability and mortality decrements do not operate during the first 5 years of service. Disability and withdrawal do not operate during retirement eligibility.
Normal Form of Benefit:	The assumed normal form of benefit is the straight life form.
Other Adjustments:	Actuarial accrued liabilities were increased by \$1,166,425 as a provision for subsidized service purchases, pending refunds, and other contingent events. Retirement present values were also adjusted for Crime Scene Technicians and ECO to reflect the “gross up factor”.
Incidence of Contributions:	Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made. New entrant normal cost contributions are applied to the funding of new entrant benefits.

SECTION D

BASIC FINANCIAL OBJECTIVE AND OPERATION OF THE RETIREMENT SYSTEM

BASIC FINANCIAL OBJECTIVE AND OPERATION OF THE RETIREMENT SYSTEM

Benefit Promises Made Which Must Be Paid For. A retirement program is an orderly means of handing out, keeping track of, and financing contingent pension promises to a group of employees. As each member of the Retirement System acquires a unit of service credit they are, in effect, handed an “IOU” which reads: “The General Retirement System promises to pay you one unit of retirement benefits, payments in cash commencing when you retire.”

The principal related financial question is: When shall the money required to cover the “IOU” be contributed? This year, when the benefit of the member’s service is received? Or, some future year when the “IOU” becomes a cash demand?

The constitution of the State of Michigan is directed to the question:

“Financial benefits arising on account of service rendered in each fiscal year shall be funded during that year and such funding shall not be used for financing unfunded accrued liabilities.”

This Retirement System meets the constitutional requirement by having the following ***Financial Objective: To establish and receive contributions, expressed as percents of active member payroll, which will remain approximately level*** from year to year and which will not have to be increased for future generations of taxpayers.

Translated into actuarial terminology, a level percent-of-payroll contribution objective means that the contribution rate must be at least:

Normal Cost (the current value of benefits likely to be paid on account of members’ service being rendered in the current year)

. . . plus . . .

Interest on the Unfunded Actuarial Accrued Liability (the difference between the actuarial accrued liability and current system assets).

If contributions to the Retirement System are less than the preceding amount, the difference, *plus investment earnings not realized thereon*, will have to be contributed at some later time or, benefits will have to be reduced, to satisfy the fundamental fiscal equation under which all retirement programs must operate; that is:

$$B = C + I - E$$

Benefit payments to any group of members and their beneficiaries cannot exceed the sum of:

Contributions received on behalf of the group from members and the City

. . . plus . . .

Ivestment earnings on plan assets

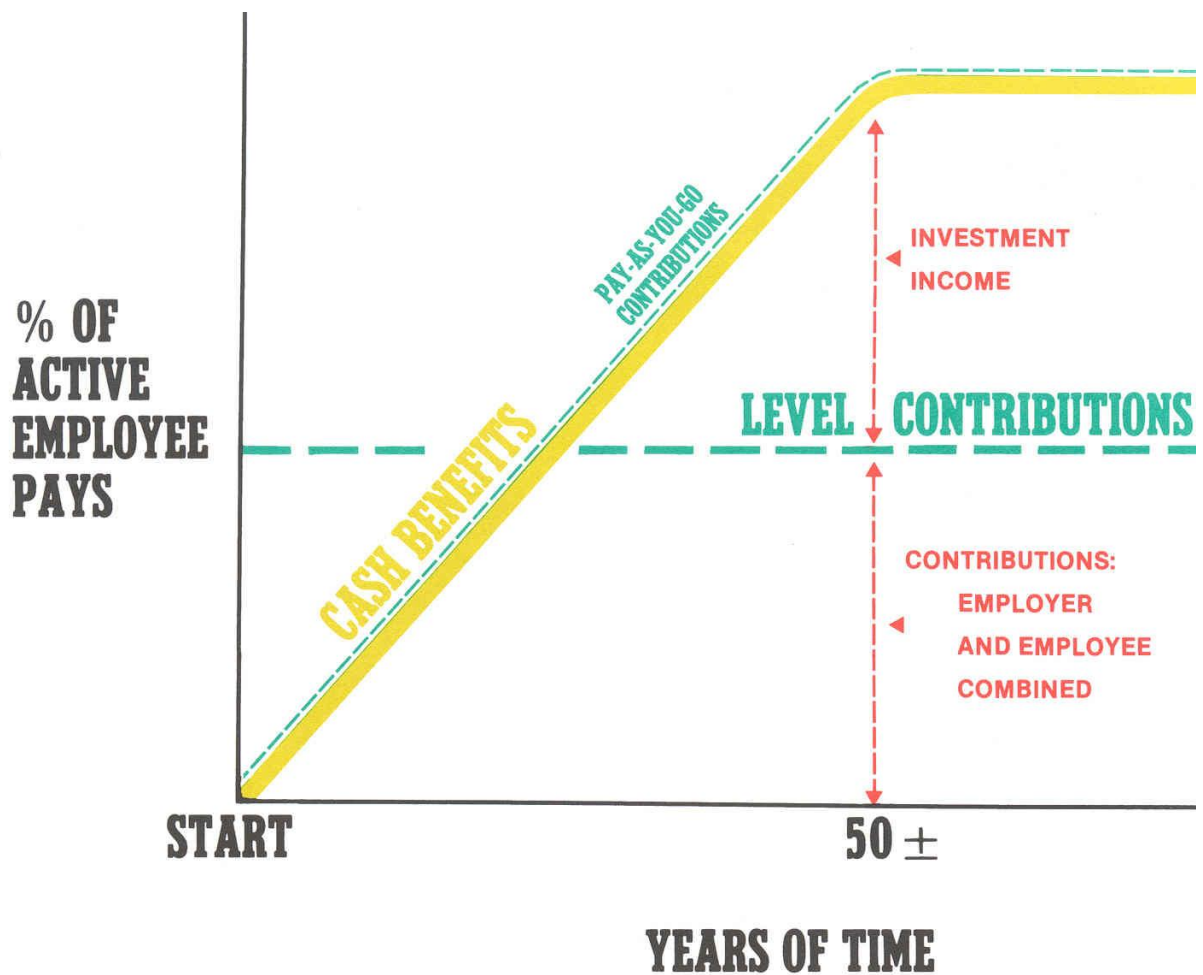

. . . minus . . .

Expenses incurred in operating the program.

There are retirement programs designed to defer the bulk of contributions far into the future. Lured by artificially low present contributions, the inevitable consequence of a relentlessly increasing contribution rate -- to a level which may be greatly in excess of the level percent-of-payroll rate -- is ignored. *This method of financing is prohibited in Michigan by the state constitution.*

A by-product of a level percent-of-payroll contribution objective is the accumulation of invested assets for varying periods of time. Invested assets are a by-product of level percent-of-payroll contributions, not the objective. Investment income becomes the third major contributor to the retirement program.

Computed Contribution Rate Needed To Finance Benefits. From a given schedule of benefits and from the data furnished him/her, the actuary calculates the contribution rate *by means of an actuarial valuation* - the technique of assigning monetary values to the risks assumed in operating a retirement program.

CASH BENEFITS LINE. This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

LEVEL CONTRIBUTION LINE. Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

Economic Risk Areas

- Rates of investment return
- Rates of pay increase
- Changes in active member group size

Non-Economic Risk Areas

- Ages at actual retirement
- Rates of mortality
- Rates of withdrawal of active members (turnover)
- Rates of disability

GLOSSARY

Actuarial Accrued Liability - The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as “accrued liability” or “past service liability.”

Accrued Service - The service credited under the plan which was rendered before the date of the actuarial valuation.

Actuarial Assumptions - Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method - A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future plan benefits” between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the “actuarial funding method.”

Actuarial Equivalent - A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

Actuarial Present Value - The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

GLOSSARY (CONCLUDED)

Amortization - Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

Experience Gain (Loss) - A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

Normal Cost - The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as “current service cost.” Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

Plan Termination Liability - The actuarial present value of future plan benefits based on the assumption that there will be no further accruals for the future service and salary. The termination liability will generally be less than the liabilities computed on a “going-concern” basis and is not normally determined in a routine actuarial valuation.

Reserve Account - An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

Unfunded Actuarial Accrued Liability - The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as “unfunded accrued liability”.

Valuation Assets - The value of current plan assets recognized for valuation purposes. Generally based on a phased-in recognition of all or a portion of market related investment return. Sometimes referred to as Actuarial Value of Assets.

SECTION E

ACTUARIAL AND SUPPLEMENTAL INFORMATION REQUIRED BY STATEMENTS NO. 25 AND NO. 27 OF THE GOVERNMENTAL ACCOUNTING STANDARDS BOARD

This information is presented in draft form for review by the System's auditor. Please let us know if there are any items that the auditor changes so that we may maintain consistency with the System's financial statements.

GASB STATEMENTS NO. 25 AND NO. 27
REQUIRED SUPPLEMENTARY INFORMATION

The information presented in the required supplementary schedules was determined as part of the actuarial valuations at the dates indicated. Additional information as of the latest valuation date follows:

Valuation Date	June 30, 2010
Actuarial Cost Method	Individual Entry Age
Amortization Method	Level percent, closed
Remaining Amortization Period	28 years
Asset Valuation Method	5-year smoothed market
Actuarial Assumptions:	
Investment Rate of Return	7.34% (7.50% for groups receiving annual post-retirement increases, 7.25% for groups participating in the 13th check program)
Projected Salary Increases	8.00% - 4.00%
Including wage inflation at	3.50%
Cost-of-living adjustments	Ad hoc "13th check" tied to plan investments

Membership of the plan consisted of the following at June 30, 2010, the date of the latest actuarial valuation:

Retirees and beneficiaries receiving benefits	1,021
Terminated plan members entitled to but not yet receiving benefits	87
Active plan members	<u>919</u>
Total	2,027

Re: 43rd Annual Actuarial Valuation

Dear Peggy:

Enclosed are 25 copies of this report.

As always, your questions and comments are welcome.

Sincerely,

A handwritten signature in black ink that reads "David L. Hoffman". The signature is written in a cursive style with a large initial "D".

David L. Hoffman
