Board of Trustees
City of Grand Rapids General
Retirement System
Grand Rapids, Michigan

Dear Board Members:

The results of the **53rd Annual Actuarial Valuation** of the City of Grand Rapids General Retirement System are presented in this report. The purpose of the annual valuation is to measure the System's funding progress and to determine the City's contribution rate for the ensuing fiscal year in accordance with the established funding policy. The results of the valuation may not be applicable for other purposes.

The date of the valuation was June 30, 2020.

This report should not be relied on for any purpose other than those described above. It was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the Retirement System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The computed contribution rate shown on page A-1 may be considered as a minimum contribution rate that complies with the funding policy stated in the Ordinance. Users of this report should be aware that contributions made at that rate do not guarantee benefit security. Given the importance of benefit security to any retirement system, we suggest that contributions to the System in excess of those presented in this report be considered.

This valuation assumes the continuing ability of the participating employer to make the contributions necessary to fund this plan. A determination regarding whether or not the participating employer is actually able to do so is outside our scope of expertise. Consequently, we did not perform such an analysis.

The signing individuals are independent of the plan sponsor.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of the actuary's assignment, the actuary did not perform an analysis of the potential range of such future measurements.

The valuation was based upon statistical data furnished by your Executive Director concerning Retirement System benefits, financial transactions, individual members, terminated members and retirants and beneficiaries. Data was checked for internal and year-to-year consistency, but was not audited. As a result, we are unable to assume responsibility for the accuracy or completeness of the data provided. This information is summarized in Section B.

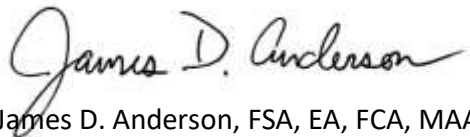

This report was prepared using our proprietary valuation model and related software which in our professional judgment has the capability to provide results that are consistent with the purposes of the valuation. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

This report includes risk metrics on pages A-8 and A-9, but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of the assignment.

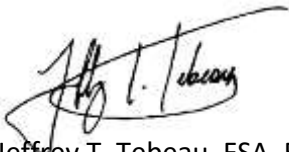

To the best of our knowledge, this report is complete and accurate and was made in accordance with standards of practice prescribed by the Actuarial Standards Board and in compliance with the Retirement System Ordinance.

James D. Anderson and Jeffrey T. Tebeau are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

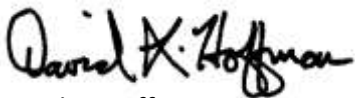

Respectfully submitted,

James D. Anderson, FSA, EA, FCA, MAAA

Jeffrey T. Tebeau, FSA, EA, MAAA

David L. Hoffman

SECTION A

VALUATION RESULTS

Contributions to Provide Benefits For Fiscal Year Beginning July 1, 2021

Contributions for	% of Active Payroll
Normal cost of benefits:	
Age & service pensions	12.93 %
Disability pensions (CRF)	0.38 %
Death-in-service pensions	0.15 %
Refunds of member contributions	1.11 %
Totals	14.57 %
Member contributions (weighted average) #	7.76 %
Employer normal cost	6.81 %
Unfunded actuarial accrued liabilities*	40.36 %
COMPUTED EMPLOYER RATE @	47.17 %
PROJECTED DOLLAR CONTRIBUTION	\$12,467,640

* Amortized over a weighted average period of 26.20 years as described beginning on page C-1.

Weighted average of member contribution rates described on pages B-7 through B-11.

@ In addition to this contribution, the City contributes for (i) certain Supplemental Benefits for a small closed group of retirants and beneficiaries in accordance with the provisions of Ordinance Section 1.290, and (ii) between 0.5% and 0.7% of payroll to provide a Medicare Supplement for members retiring after December 31, 1989.

For comparison, the Computed Employer Rate and Projected Dollar Contribution last year were 39.31% and \$11,113,051, respectively.

Allocation of Valuation Assets Year Ended JUNE 30, 2020

In financing the actuarial accrued liabilities, valuation assets of \$426,996,313 were distributed as follows:

Reserves for	Present Valuation Assets Applied to			Totals
	Non-Retired Member Actuarial Accrued Liabilities	Retired Life Actuarial Liabilities	Contingency Reserve	
Member Contributions (MDF)	\$ 36,797,351			\$ 36,797,351
Employer Contributions (EAF)	(81,969,658)			(81,969,658)
Retired Benefit Payments (BRF)	(7,960,229)	\$386,589,984		378,629,755
Undistributed Income (IEF)	93,538,865			93,538,865
Totals	\$ 40,406,329	\$386,589,984	\$0	\$426,996,313

Assets were applied against actuarial accrued liabilities in determining unfunded actuarial accrued liabilities as follows:

	Retired Lives	Non-Retired Members	Total
Computed Actuarial Accrued Liabilities and Reserves	\$386,589,984	\$171,009,181	\$557,599,165
Applied Assets	386,589,984	40,406,329	426,996,313
Unfunded Actuarial Accrued Liabilities (Full Funding Credit)	\$ 0	\$130,602,852	\$130,602,852

Derivation of Experience Gain (Loss) Year Ended JUNE 30, 2020

Actual experience will never (except by coincidence) coincide exactly with assumed experience; sizable year-to-year fluctuations are common. Gains and losses often cancel each other over a period of years. Detail on the derivation of the experience gain (loss) is shown below, along with a year-by-year comparative schedule.

	2019-2020	2018-2019
(1) UAAL* at start of year	\$ 110,160,734	\$ 99,965,069
(2) Employer normal cost from last valuation	2,262,474	2,226,466
(3) Actual employer contributions	11,325,243	12,920,265
(4) Interest accrual: $[(1) + \frac{1}{2} [(2) - (3)]] \times .0700$	7,394,054	6,765,199
(5) Expected UAAL before changes: (1) + (2) - (3) + (4)	108,492,019	96,036,469
(6) Increase from benefit changes	none	none
(7) Change from revised actuarial assumptions or valuation methods	12,565,643	7,963,218
(8) Other Changes	none	none
(9) Expected UAAL after changes: (5) + (6) + (7) + (8)	121,057,662	103,999,687
(10) Actual UAAL at end of year	130,602,852	110,160,734
(11) Gain (loss): (9) - (10)	(9,545,190)	(6,161,047)
(12) Gain (loss) as percent of actuarial accrued liabilities at start of year (\$539,265,786)	(1.8)%	(1.2)%

* *Unfunded Actuarial Accrued Liabilities.*

Valuation Date June 30	Experience Gain (Loss) as % of Beginning Accrued Liability
2014	6.4 %
2015	0.8 %
2016	(1.4)%
2017	1.1 %
2018	0.5 %
2019	(1.2)%
2020	(1.8)%

Summary Statement of System Resources and Obligations

Year Ended JUNE 30, 2020

Present Resources and Expected Future Resources

A.	Present valuation assets:	
	1. Net assets from System financial statements	\$403,408,591
	2. Market value adjustment	23,587,722
	3. Valuation assets	\$426,996,313
B.	Actuarial present value of expected future employer contributions:	
	1. For normal costs	\$ 10,789,997
	2. For unfunded actuarial accrued liability	130,602,852
	3. Total	\$141,392,849
C.	Actuarial present value of expected future member contributions	\$ 13,607,547
D.	Total present and expected future resources	\$581,996,709

Actuarial Present Value of Expected Future Benefit Payments

A.	To retirants and beneficiaries:	
	1. Annual pensions	\$386,589,984
	2. Reserve	0
	3. Total	\$386,589,984
B.	To vested terminated members	\$ 18,190,719
C.	To present active members:	
	1. Allocated to service rendered prior to valuation date - actuarial accrued liability	\$152,818,462
	2. Allocated to service likely to be rendered after valuation date	24,397,544
	3. Total	\$177,216,006
D.	Total actuarial present value of expected future benefit payments	\$581,996,709

Comments, Recommendation and Conclusion

Comment A: Overall experience compared to expectations was unfavorable during the period ending June 30, 2020 (see page A-3) due to investment losses partially offset by gains on retired life mortality and active member experience. The total net loss as a result of all financial and demographic experience was \$9.5 million.

Comment B: At the June 2020 meeting, the Board approved changes to the System’s actuarial assumptions based on the five-year (July 1, 2014 through June 30, 2019) experience study. The following assumptions were updated:

- The wage inflation assumption was reduced to 3.00% (reflects price inflation assumption of 2.25%).
- The assumed mortality rates for all members were updated to the Pub-2010 Mortality Tables using the MP-2019 mortality improvement.
- Disability rates and withdrawal patterns of the active population were updated based on experience of the plan.
- Liability loads for service purchases and the 13th program were updated.

These changes increased the System’s total accrued liability by \$12.6 million and the employer contribution rate by 3.05% of payroll.

Comment C: The Actuarial Value of Assets exceeded the Market Value of Assets by \$23.6 million as of June 30, 2020. Note that the ratio of assets computed under funding value relative to the market value of assets is 105.9% (\$427 million and \$403 million, respectively).

Comment D: Below is a 5-year contribution rate projection in the case where all assumptions for future experience are exactly realized. Additional detail on the amortization method used for the projection is provided on page C-1.

7.00% Market Return											
Valuation Year	Applicable Contribution FY Ended June 30	Employer Normal Cost	Amortization Payment	Total Employer Rate	Projected Employer Contribution (\$ Millions)	Funded Ratio	Funding Value	Market Value	FV Return	MV Return	MV-FV
							(\$ Millions)				
2020	2022	6.81%	40.36%	47.17%	\$12.5	79%	\$ 427.0	\$ 403.4	4.43%	1.18%	\$ (23.6)
2021	2023	6.66%	45.15%	51.81%	12.7	81%	430.1	410.3	5.70%	7.00%	(19.8)
2022	2024	6.57%	51.25%	57.82%	13.1	82%	431.4	417.6	5.21%	7.00%	(13.7)
2023	2025	6.48%	58.39%	64.87%	13.5	83%	432.7	425.5	5.22%	7.00%	(7.2)
2024	2026	6.36%	66.01%	72.37%	13.7	83%	435.8	433.9	5.63%	7.00%	(1.9)

All measurements are as of the stated valuation year with rates applicable to the stated fiscal year.

Comments, Recommendation and Conclusion

Recommendation for Regular Reserve Transfer: Inter-fund transfers are made either when: (i) there is a residual June 30 balance in the Income-Expense Fund (IEF) after regular interest credits have been made; or (ii) the year-end balance in the Benefit Reserve Fund (BRF) falls below the present value of benefits currently being paid. Transfers will be made between the appropriate funds so that the ending balances in the IEF and BRF are \$0 and \$386,589,984, respectively.

Conclusion: The City's contribution rate for the fiscal year beginning July 1, 2021 has been computed to be 47.17% of active member payroll based on the funding policy specified in the retirement ordinance.

Other Observations

General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected System Contributions and Funded Status

Given the System's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the System earning 7.00% on the actuarial value of assets), it is expected that:

- 1) The employer normal cost as a percentage of pay will decrease to the level of the benefit provisions for members hired after 2004 (for most employee groups) as time passes and the majority of the active population is comprised of members hired after this date;
- 2) The unfunded actuarial accrued liabilities will be fully amortized as of June 30, 2051 (see page C-2); and
- 3) The funded status of the plan will increase gradually towards a 100% funded ratio.

Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

- 1) The measurement is inappropriate for assessing the sufficiency of System assets to cover the estimated cost of settling the System's benefit obligations, for example: transferring the liability to an unrelated third party in a market value type transaction.
- 2) The measurement is dependent upon the actuarial cost method which, in combination with the System's amortization policy, affects the timing and amounts of future contributions. The amounts of future contributions will most certainly differ from those assumed in this report due to future actual experience differing from assumed experience based upon the actuarial assumptions. A funded status measurement in this report of 100% is not synonymous with no required future contributions. If the funded status were 100%, the System would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).
- 3) The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets, unless the market value of assets is used in the measurement.

Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. **Investment risk** – actual investment returns may differ from the expected returns;
2. **Asset/Liability mismatch** – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. **Contribution risk** – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. **Salary and Payroll risk** – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. **Longevity risk** – members may live longer or shorter than expected and receive pensions for a period of time other than assumed; and
6. **Other demographic risks** – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

PLAN MATURITY MEASURES

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	2020	2019	2018
Ratio of the market value of assets to total payroll	14.0	14.1	13.5
Ratio of actuarial accrued liability to payroll	19.3	18.2	17.0
Ratio of actives to retirees and beneficiaries	0.4	0.4	0.4
Ratio of net cash flow to market value of assets	-5.1%	-4.4%	-5.0%

RATIO OF MARKET VALUE OF ASSETS TO PAYROLL

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 2.0 times the payroll, a return on assets 5% different than assumed would equal 10% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

RATIO OF ACTUARIAL ACCRUED LIABILITY TO PAYROLL

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time. The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 2.5 times the payroll, a change in liability 2% other than assumed would equal 5% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

RATIO OF ACTIVES TO RETIREES AND BENEFICIARIES

A young plan with many active members and few retirees will have a high ratio of actives to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

RATIO OF NET CASH FLOW TO MARKET VALUE OF ASSETS

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

ADDITIONAL RISK ASSESSMENT

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

Benefit Reserve Fund Comparative Statement

Valuation Date	Pensions Being Paid #		BRF Assets	Actuarial	Assets/ Liabilities

* Retirement System amended.

@ Revised actuarial assumptions.

Revised asset valuation method.

- 1 Valuation Assets as a Percent of AAL** is a traditional measure of a System's funding progress. Except in years when the System is amended or actuarial assumptions are revised, this percent can be expected to move gradually toward 100%.
- 2 UAAL as a Percent of Valuation Payroll** is another relative index of condition. Unfunded actuarial accrued liabilities represent debt, while active member payroll represents the System's capacity to collect contributions to pay toward debt. The lower the percent, the greater the financial strength and vice-versa.

SECTION B

VALUATION DATA

Summary of Benefit Provisions Evaluated (JUNE 30, 2020)

Voluntary Retirement. A member may retire after 30 years of service regardless of age, or after attaining age 62 and completing 8 years of service. Effective January 1, 2001, members covered by the Emergency Communications Operators Bargaining Unit, may retire after attaining age 55 and completing 8 years of service.

Final Average Salary (FAS). The average of member's highest annual salary rates, all before completion of the calendar year in which the member attains 40 years of service or reaches the benefit cap, during the three calendar years of credited service when such salary rates were the highest.

Members of the Crime Scene Technicians group have an additional sum added to their FAS, effective July 1, 2000. The sum is calculated based on an average of the group's additional compensation items during the previous three calendar years and the average of the group's valuation payroll as of June 30 for the five-year period immediately preceding the valuation.

Emergency Communication Operators I, II, and III also have an additional sum added to their FAS, effective July 1, 2005. The sum is calculated based on an average of the group's additional compensation items during the previous five calendar years and the average of the group's valuation payroll as of June 30 for the five-year period immediately preceding the valuation.

Members who retire with 10 or more years of continuous service may use up to two thousand eighty (2,080) hours (1,265 for Crime Scene Technician members) of accumulated sick leave to purchase up to one (1) year of additional credited service, on a pro rata basis.

Full Age and Service Allowance. The members' benefit multipliers, used to compute full age and service allowance, are shown in the tables on the following pages.

In lieu of this single life-level amount form of payment, a retiring member may elect from several optional forms of payment, each of which is the actuarial equivalent of this single life-level payment form.

Summary of Benefit Provisions Evaluated (JUNE 30, 2020) (Continued)

Early Allowance. If a member leaves covered employment after either: (i) completing 20 years of credited service; or (ii) both attaining age 55 and completing 10 years or more of credited service, he can receive an immediate early allowance, computed in the same manner as an age and service allowance based upon salary and service to time of termination but actuarially reduced to reflect the fact that the age when payments begin is younger than age 62.

Deferred Retirement. A member with 8 or more years of credited service who terminates employment before voluntary retirement age and does not withdraw accumulated contributions will be eligible for a deferred allowance beginning at age 62, based upon service and final average salary at time of termination.

Death Benefit. If the member's termination of employment is because of death, a benefit equal to the termination benefit is payable to a beneficiary or estate, as follows:

A refund of accumulated contributions. In addition, a "termination bonus" equivalent to a certain percent of member contributions without interest may be payable. Such percent is 25%, plus 7.5% for each whole year of credited service in excess of 10 years, to a maximum of 100% for 20 or more years of service, times an age-based Termination Bonus Percent.

If the member was eligible for normal or early retirement at the time of death, in lieu of the lump sum death benefit an eligible beneficiary will begin receiving a B-100 joint and survivor pension computed in the same manner as a service retirement pension as if the member had retired the last day of his life.

Or, if the member was not represented by any collective bargaining unit or was represented by the Association of Public Administrators, the Grand Rapids Employees Independent Union or the 61st District Court Employee's Association, and the primary beneficiary was the surviving spouse, the benefit will be computed in the manner described in the preceding paragraph, except that the member will have been assumed to have reached the age for minimum service retirement at the date of his death.

The total amount of death benefit payable cannot exceed 90% of the member's annual rate of compensation at the time of death reduced by any worker's compensation or social security payments.

Summary of Benefit Provisions Evaluated (JUNE 30, 2020) (Continued)

Disability Benefit. If a member has 10 or more years of credited service before attaining the minimum service retirement age and becomes totally and permanently disabled, a benefit computed in the same manner as a full age and service benefit is payable. If disablement is a result of performance of duty, the 10-year minimum credited service requirement is waived and the benefit is computed as above with a minimum benefit of 50% (62% for those represented by police bargaining units) of final average salary.

The total amount of benefit payable due to disablement cannot exceed 90% of the member's annual rate of compensation at the time of disablement reduced by any worker's compensation payments, Social Security benefits, (disability benefits), and remuneration from any gainful employment.

Member Contributions. The contribution rates used are defined in the following table:

Member Classification	Period	Contribution Rate
Non-Represented Members, as defined in Section 1.192(18.1), excluding secretarial or clerical members designated as management non-union for payroll purposes, and excluding the Executive Administrative Assistant at the Grand Rapids Public Library	On or before July 1, 1977	3%
	July 2, 1977 to December 31, 1994	4%
	January 1, 1995 to December 31, 1996	3%
	January 1, 1997 to December 31, 2004	3.28%
	January 1, 2005 to September 4, 2010	4.93%
	On or after September 5, 2010	10.20%, or 8.95% or 7.28%, depending on the individual election made by the member as provided in Section 1.229(1)
		6.15% for those non-represented members hired or re-entering service from September 5, 2010 through June 30, 2011

Summary of Benefit Provisions Evaluated (JUNE 30, 2020) (Continued)

Member Classification	Period	Contribution Rate
Non-Represented Members, as defined in Section 1.192(18.1), including only secretarial or clerical members designated as management non-union for payroll purposes, and including the Executive Administrative Assistant at the Grand Rapids Public Library	On or before July 1, 1977	3%

Summary of Benefit Provisions Evaluated (JUNE 30, 2020) (Concluded)

If a member terminates employment before any allowance is payable, accumulated contributions (contributions plus regular interest) are refunded.

Employer Contributions. The City contributes the remainder amounts necessary to maintain the Retirement System in sound financial condition in accordance with its funding objectives.

Compensation. Compensation recognized for retirement system purposes includes base pay and longevity pay.

Post Retirement Increases. Post retirement benefit increases are 0% unless otherwise stated:

Member Classification	Termination Date	Escalator
GREIU and GREIU-61 st District Court	On or after March 24, 2009	1.0%, 4 year delay
GREIU Public Library Rank and File & Supervisory Bargaining Units	On or after July 9, 2009	1.0%, 4 year delay
Crime Scene Techs/Latent Print Examiners represented by the GRPOA	On or after May 12, 2009	1.0%, 6 year delay
Association of Public Administrators and APA 61 st District Court	On or after October 21, 2008	1.0%, 4 year delay
EC Supervisors	On or after September 13, 2011	1.0%, 6 year delay
Non-Represented Members	On or after July 1, 2014	1.0%, 7 year delay

13th Check. One-half of net investment income over 8% which is attributable to retired life assets is distributed annually (in January) to retired members and beneficiaries who have been on the retirement rolls for 5 years in the form of a 13th check. Net investment income is based on a market value rate of return averaged over the preceding 5 plan years. The distribution is in proportion to points. An individual's points are determined by multiplying (i) the number of full years of retirement, to a maximum of 15, by (ii) the number of years, and fractions thereof, of service at retirement. Only member classification groups not covered by the post-retirement increase participate in the 13th check program.

F3. Second Prior Year	(5,705,836)	1,824,217	(185,706)	(1,818,870)	\$(4,895,979)		
F4. Third Prior Year	(3,407,251)	(5,705,836)	1,824,217	(185,706)	(1,818,870)	\$ (4,895,979)	
F5. Fourth Prior Year	7,776,890	(3,407,250)	(5,705,834)	1,824,215	(185,704)	(1,818,872)	\$ (4,895,978)
F6. Total Recognized Investment Gain (Loss)	302,314	(9,293,445)	(10,782,172)	(5,076,340)	(6,900,553)	(6,714,851)	(4,895,978)
G. Funding Value End of Year: A+D+E3+F6	426,989,004	429,105,052	426,996,313				
H. Difference Between Market & Funding Values	(10,089,093)	(9,890,000)	(23,587,722)				
I. Recognized Rate of Return	7.32%	4.93%	4.43%				
J. Market Value Rate of Return	7.18%	5.10%	1.18%				
K. Ratio of Funding Value to Market Value	102.42%	102.36%	105.85%				

The Funding Value of Assets recognizes assumed investment return (line E3) fully each year. Differences between actual and assumed investment return (line E4) are phased-in over a closed 5-year period. During periods when investment performance exceeds the assumed rate, Funding Value of Assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, Funding Value of Assets will tend to be greater than market value. If assumed rates are exactly realized for 4 consecutive years, funding value will become equal to market value.

SECTION C

SUMMARY OF VALUATION METHODS AND ASSUMPTIONS

Valuation Methods

Age and Service Benefits and Casualty Benefits. Normal cost and the allocation of benefit values between service rendered before and after the valuation date was determined using an individual entry-age actuarial cost method having the following characteristics:

- (i) The annual normal costs for each individual active member, payable from the date of employment to the date of retirement, are sufficient to accumulate the value of the member's benefit at the time of retirement; and
- (ii) Each annual normal cost is a constant percentage of the member's year-by-year projected covered pay.

Financing of Unfunded Actuarial Accrued Liabilities. Unfunded actuarial accrued liabilities were amortized by (principal & interest combined) level dollar contributions as according to the schedule below. The weighted average remaining period is 26.20 years. This change was made by the City per City Code Section 1.221 and first reflected in the June 30, 2015 valuation report.

According to City Code Section 1.221, "The pension reserves so determined less the applicable balance in the employer accumulation fund shall be amortized over a period of years, as determined by the employer, to determine the employer's accrued service contribution."

Base Year	Current Balance	Remaining Financing Period	Amortization Factor	Dollar Payment	% of Payroll Contribution
2015	\$ 93,573,245	25 yrs.	12.056860	\$ 7,760,996	29.36%
2016	8,358,674	26	12.235014	683,176	2.58%

2050	0.01	2.61	26100.00%
2051	0.00	1.71	57000.00%
2052	0.00	0.00	0.00%

The schedule above projects future UAL amortization payments based on the current UAL and where all assumptions for future experience are exactly realized. Gains and losses from all risk areas will likely have a material effect on contributions in future years.

The Projected Payroll assumes the Retirement System will have no new active participants. The Amortization Payment % is shown as a percent of this projected payroll.

Actuarial Assumptions Used for the Valuation Adopted by the Board of Trustees

The actuary calculates the contribution requirements and benefit values of the System by applying financial assumptions to the benefit provisions and people information furnished, using the valuation methods described on the previous page.

The principal areas of financial risk which require assumptions about future experiences are:

- (i) Long-term rates of investment return to be generated by the assets of the System,
- (ii) patterns of pay increases to members,
- (iii) rates of mortality among members, retirants and beneficiaries,
- (iv) rates of withdrawal of active members (without entitlement to a retirement benefit),
- (v) rates of disability among members, and
- (vi) the age patterns of actual retirement.

In a valuation, the actuary calculates the monetary effect of each assumption for as long as a present covered person survives - - - a period of time which can be as long as a century.

Actual experience of the System will not coincide exactly with assumed experience, regardless of the wisdom of the assumptions, or the skill of the actuary and the precision of the many calculations made. Each valuation provides a complete recalculation of assumed future experience and considers all past differences between assumed and actual experience. The result is a continual series of adjustments (usually small) to the computed contribution rate.

From time-to-time it becomes appropriate to modify one or more of the assumptions, to reflect experience trends (but not random year-to-year fluctuations).

The rationale for the assumptions used in this valuation is included in the 5-year experience study ending June 30, 2019, approved by the Board in June 2020. All assumptions are expectations of future experience, not market measures.

The rates of salary increase used for individual members are in accordance with the following table. This assumption is used to project a member's current salary to the salaries upon which benefit amounts will be based.

Salary Increase Assumptions for an Individual Member			
Sample Ages	Merit & Seniority	Base (Economic)	Increase Next Year
20	4.16%	3.00%	7.16%
25	2.88	3.00	5.88
30	1.98	3.00	4.98
35	1.52	3.00	4.52
40	1.10	3.00	4.10
45	0.66	3.00	3.66
50	0.32	3.00	3.32
55	0.14	3.00	3.14
60	0.00	3.00	3.00
65	--	3.00	3.00

Service at Beginning of Year	Additional Service Based Merit/Seniority Portion of Annual Increases
	Present
1	4.00%
2	3.00%
3	1.75%
4	1.75%
5	1.75%

If the number of active members remains constant, then the total active member payroll will increase 3.00% annually, the base portion of the individual salary increase assumptions. The 3.00% assumption was first used for the June 30, 2020 valuation.

The rate of investment return was 7.00% a year compounded yearly and was first used for the June 30, 2019 valuation.

The rate of inflation (price) was 2.25% a year compounded yearly. While not explicitly used in the valuation, this assumption was first reflected in the June 30, 2020 valuation.

The mortality tables

- **Healthy Pre-Retirement:** The Pub-2010 Amount-Weighted, General, Employee, Male and Female tables, a base year of 2010 and future mortality improvements projected using scale MP-2019.
- **Healthy Post-Retirement:** The Pub-2010 Amount-Weighted, General, Healthy Retiree, Male and Female tables, with a base year of 2010 and future mortality improvements projected using scale MP-2019.
- **Disability Retirement:** The Pub-2010 Amount-Weighted, General, Disabled Retiree, Male and Female, with a base year of 2010 and future mortality improvements projected using scale MP-2019.

The following sample rates are based on the Healthy Post-Retirement tables:

Sample Ages in 2020	Value at Retirement of \$1 Monthly for Life		Future Life Expectancy (Years)*	
	Men	Women	Men	Women
50	\$154.12	\$158.37	35.54	38.50
55	146.87	152.29	30.64	33.52
60	137.82	144.39	25.93	28.65
65	126.66	134.13	21.43	23.92
70	112.86	121.07	17.17	19.36
75	96.49	105.15	13.21	15.09
80	78.47	87.12	9.73	11.26

* Applicable to the year ended June 30, 2020. Life expectancy in future years is based on the MP-2019 projection scale.

These rates were first used for the June 30, 2020 valuation.

The rates of retirement used to measure the probability of eligible members retiring during the next year were as follows. These rates were first used for the June 30, 2020 valuation.

A member is eligible for retirement after completing 30 or more years of service or after both attaining age 62 and completing 8 or more years of service. Prior to the above eligibility, members who are eligible for early reduced retirement are assumed to elect this option at a 3% rate per year until eligible for Normal Retirement.

Normal Unreduced Retirement

Retirement Ages	Percent Retiring	Retirement Ages	Percent Retiring
50	40%	60	40%
51	40	61	40
52	40	62	40
53	40	63	40
54	40	64	40
55	40	65	50
56	40	66	60
57	40	67	70
58	40	68	80
59	40	69	90
		70+	100

Rates of separation from active membership were as follows:

(Rates do not apply to members eligible to retire and do not include separation on account of death or disability.) This assumption measures the probabilities of members remaining in employment. These rates were first used for the June 30, 2020 valuation.

Sample Ages	Years of Service	% of Active Members Separating within Next Year	
		Men	Women
ALL	0	15.00%	15.00%
	1	8.00	8.00
	2	7.00	7.00
	3	6.00	6.00
	4	5.00	5.00
20	5 & Over	6.04	13.57
25		5.87	13.21
30		5.62	12.35
35		5.22	10.73
40		4.65	8.81
45		3.93	6.80
50		2.75	4.38
55		1.04	1.61
60		0.10	0.15

The rates of disability were as follows:

Sample Ages	% of Active Members Becoming Disabled within Next Year		
	Duty Related	Non-Duty Related	
20	0.01%		
25	0.01		
30	0.01		
35	0.07		
40	0.13		
45	0.29		
50	0.56		
55	0.84		
60	1.09		
Cause of Disability:	Men	30%	70%
	Women	30%	70%

These rates were first used for the June 30, 2020 valuation.

Miscellaneous and Technical Assumptions

JUNE 30, 2020

Marriage Assumption:	100% of males and females are assumed to be married for purposes of death-in-service benefits.
Pay Increase Timing:	Beginning of (Fiscal) year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date.
Decrement Timing:	Decrements of all types are assumed to occur in the middle of the year.
Eligibility Testing:	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
Benefit Service:	Exact fractional service is used to determine the amount of benefit payable.
Decrement Relativity:	Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
Decrement Operation:	Disability and mortality decrements do not operate during the first 5 years of service. Disability and withdrawal do not operate during retirement eligibility.
Normal Form of Benefit:	The assumed normal form of benefit is the straight life form.
Other Adjustments:	Actuarial accrued liabilities were adjusted as a provision for subsidized service purchases, pending refunds, and other contingent events. Retirement present values were also adjusted for Crime Scene Technicians and ECO to reflect the “gross up factor.”
Incidence of Contributions:	Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made. New entrant normal cost contributions are applied to the funding of new entrant benefits.
Multiplier Election:	Most active members have the option to make higher member contributions and receive a higher benefit multiplier. Individual elections are reported and reflected in the valuation results.
13th Check Payments:	Future liabilities of members in the 13 th Check program were increased by 7.5% to account for future payments.
Service Purchases:	Liabilities were increased by \$3.6 million to load for service purchases made to date.

SECTION D

BASIC FINANCIAL OBJECTIVE AND OPERATION OF THE RETIREMENT SYSTEM

Basic Financial Objective and Operation of the Retirement System

Benefit Promises Made Which Must Be Paid For. A retirement program is an orderly means of handing out, keeping track of, and financing contingent pension promises to a group of employees. As each member of the Retirement System acquires a unit of service credit they are, in effect, handed an “IOU” which reads: “The General Retirement System promises to pay you one unit of retirement benefits, payments in cash commencing when you retire.”

The principal related financial question is: When shall the money required to cover the “IOU” be contributed? This year, when the benefit of the member’s service is received? Or, some future year when the “IOU” becomes a cash demand?

The constitution of the State of Michigan is directed to the question:

“Financial benefits arising on account of service rendered in each fiscal year shall be funded during that year and such funding shall not be used for financing unfunded accrued liabilities.”

This Retirement System meets the constitutional requirement by having the following ***Financial Objective: To establish and receive contributions, expressed as percents of active member payroll, which will remain approximately level*** from year-to-year and which will not have to be increased for future generations of taxpayers.

Translated into actuarial terminology, a level percent-of-payroll contribution objective means that the contribution rate must be at least:

Normal Cost (the current value of benefits likely to be paid on account of members’ service being rendered in the current year)

. . . plus . . .

Interest on the Unfunded Actuarial Accrued Liability (the difference between the actuarial accrued liability and current system assets).

If contributions to the Retirement System are less than the preceding amount, the difference, **plus investment earnings not realized thereon**, will have to be contributed at some later time or, benefits will have to be reduced, to satisfy the fundamental fiscal equation under which all retirement programs must operate; that is:

$$B = C + I - E$$

Benefit payments to any group of members and their beneficiaries cannot exceed the sum of:

Contributions received on behalf of the group from members and the City

. . . plus . . .

Ivestment earnings on plan assets

. . . minus . . .

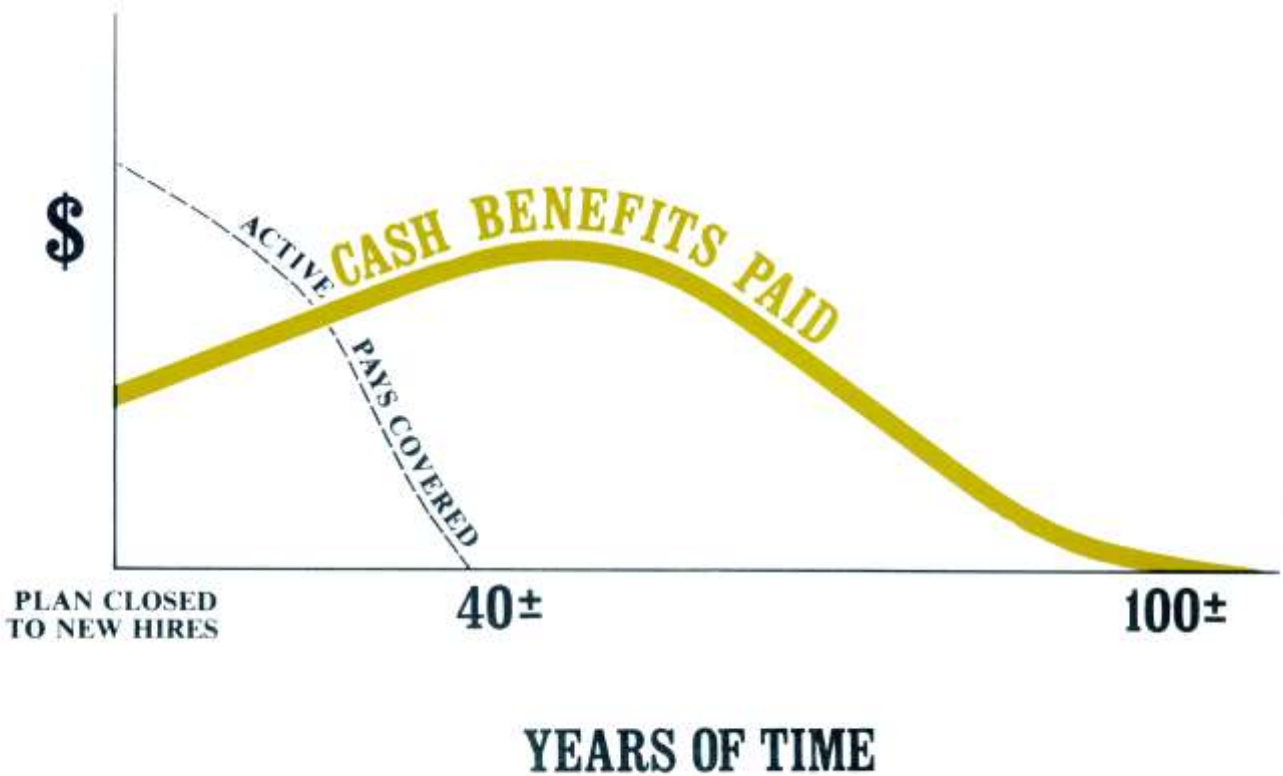

Expenses incurred in operating the program.

There are retirement programs designed to defer the bulk of contributions far into the future. Lured by artificially low present contributions, the inevitable consequence of a relentlessly increasing contribution rate -- to a level which may be greatly in excess of the level percent-of-payroll rate -- is ignored. ***This method of financing is prohibited in Michigan by the state constitution.***

A by-product of a level percent-of-payroll contribution objective is the accumulation of invested assets for varying periods of time. Invested assets are a by-product of level percent-of-payroll contributions, not the objective. Investment income becomes the third major contributor to the retirement program.

Computed Contribution Rate Needed to Finance Benefits. From a given schedule of benefits and from the data furnished him/her, the actuary calculates the contribution rate ***by means of an actuarial valuation*** - the technique of assigning monetary values to the risks assumed in operating a retirement program.

A CLOSED PENSION PLAN

A plan becomes closed when no new hires are admitted to active membership. The persons covered by the plan at the time of closing continue their normal activities and continue to be covered by the plan, until the last survivor dies.

Cash Benefits Line. After a pension plan becomes closed, the usual pattern is for cash benefits to continue to increase for decades of time. Eventually the cash benefits will peak, and then gradually decrease over more decades of time, ultimately to zero. The last cash benefit is likely to occur a century after the time the plan is closed.

The precise amount of cash benefits cannot be known now, and must be estimated by assumptions of future experience in a variety of financial risk areas.

Glossary

Actuarial Accrued Liability - The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as “accrued liability” or “past service liability.”

Accrued Service - The service credited under the plan which was rendered before the date of the actuarial valuation.

Actuarial Assumptions - Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method - A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future plan benefits” between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the “actuarial funding method.”

Actuarial Equivalent - A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

Actuarial Present Value - The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

Amortization - Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

Experience Gain (Loss) - A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

Normal Cost - The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as “current service cost.” Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

Plan Termination Liability - The actuarial present value of future plan benefits based on the assumption that there will be no further accruals for the future service and salary. The termination liability will generally be less than the liabilities computed on a “going-concern” basis and is not normally determined in a routine actuarial valuation.

Glossary (Concluded)

Reserve Account - An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

Unfunded Actuarial Accrued Liability - The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as “unfunded accrued liability.”

Valuation Assets - The value of current plan assets recognized for valuation purposes. Generally based on a phased-in recognition of all or a portion of market related investment return. Sometimes referred to as Actuarial Value of Assets.

SECTION E

HISTORICAL GASB STATEMENTS No. 25 AND No. 27 INFORMATION

GASB Statements No. 67 and No. 68 are the accounting standards which replaced Statements No. 25 and No. 27. GASB Statement No. 67 is first effective for fiscal year 2014 and GASB Statement No. 68 is first effective for fiscal year 2015. A separate GASB Statements No. 67 and No. 68 report has been issued outside of this report. This section contains historical GASB Statements No. 25 and No. 27 reporting information for prior fiscal years and illustrative information for fiscal year 2015 and beyond.

For Compliance with Historical GASB Statements Required Supplementary Information

The information presented in the required supplementary schedules was determined as part of the actuarial valuations at the dates indicated. Additional information as of the latest valuation date follows:

Valuation Date	June 30, 2020
Actuarial Cost Method	Individual Entry Age
Amortization Method	Level dollar, closed
Remaining Amortization Period	26.2 years
Asset Valuation Method	5-year smoothed market
Actuarial Assumptions:	
Investment Rate of Return	7% for all groups
Projected Salary Increases Including Wage Inflation at Cost-of-Living Adjustments	3.00% to 8.00%, plus up to 4.00% depending on service 3.00% Ad hoc "13th check" tied to plan investments for benefit recipients who do not have an automatic benefit increase. 1.0% simple escalator for those eligible.

Membership of the plan consisted of the following at June 30, 2020, the date of the latest actuarial valuation:

Retirees and beneficiaries receiving benefits	1,189
Terminated plan members entitled to but not yet receiving benefits	106
Active plan members	<u>418</u>
Total	1,713
